

Question 1:

What are media queries in CSS, and why are they important for responsive design?

➤ **Definition:**

→ Media queries are used to apply **different CSS styles** based on **device characteristics** like screen size, resolution, or orientation.

➤ **Syntax Example:**

```
@media (max-width: 600px) {  
  body {background-color: light blue; }  
}
```

→ Applies the style only when the screen width is **600px or less**.

➤ **Importance for Responsive Design:**

→ Makes websites look good on all devices (mobile, tablet, desktop).

→ Helps create flexible layouts that adjust automatically.

→ Improves user experience and accessibility across screen sizes.

→ Essential for modern web design and mobile-first development.

Question 2:

Write a basic media query that adjusts the font size of a webpage for screens smaller than 600px.

➤ **Basic Media Query Example**

→ **Purpose:** Adjust font size for small screens (<600px).

➤ **CSS Code:**

```
@media (max-width: 600px) {  
  body {  
    font-size: 14px;  
  }  
}
```

➤ **Explanation:**

- Applies the font-size: 14px style only when screen width is 600px or less.
- Helps make text readable on mobile devices.
