

Interview Questions For Reactjs

1. React Basics

- What is React, and why is it used?
- Explain the concept of components in React.
- What are props in React? How do they differ from state?
- Describe the difference between functional and class components.
- What is JSX, and why do we use it in React?
- How can you conditionally render elements in React?

2. Component Lifecycle

- What are React component lifecycle methods?
- Explain the difference between `componentDidMount` and `componentWillUnmount`.
- What is the purpose of `getDerivedStateFromProps`?
- How do hooks change the way we handle lifecycle events in functional components?

3. State Management

- What is state in React, and how is it different from props?
- How do you update the state in a class component?
- What is the `useState` hook, and how do you use it?
- Explain the concept of lifting state up in React.
- What are controlled components in React?

4. Handling Events

- How do you handle events in React?
- Explain how to prevent default behavior for an event in React.
- What is the significance of using arrow functions in event handlers?
- How can you pass parameters to an event handler?

5. React Hooks

- What are React hooks, and why were they introduced?
- Explain the `useEffect` hook and its use cases.
- What is the `useContext` hook, and how does it simplify state management?
- How can you create a custom hook in React?

6. Routing

- What is React Router, and why is it used?
- Explain the difference between `BrowserRouter` and `HashRouter`.
- How do you create nested routes in React Router?
- What are route parameters, and how can you access them?

7. Forms in React

- How do you handle forms in React?
- What is the difference between controlled and uncontrolled components?
- Explain how to manage form inputs with state.
- How do you implement form validation in React?

8. Performance Optimization

- What are some techniques for optimizing performance in a React application?
- Explain the concept of memoization in React.
- What is `React.memo`, and when would you use it?
- How can you prevent unnecessary re-renders in a React component?

9. Testing

- What are some common testing libraries used with React?
- How do you write unit tests for React components?
- What is the purpose of snapshot testing in React?
- Explain how to mock API calls in your tests.

10. Advanced Concepts

- What is the context API in React?
- How do you manage global state in a React application?
- What are higher-order components (HOCs), and how are they used?
- Explain the concept of render props in React.
- What are the differences between React and other front-end frameworks like Angular or Vue.js?

11. Common Challenges

- What are some common challenges you have faced while working with React?
- How do you handle asynchronous operations in React?
- What strategies do you use to manage side effects in a React application?
- Explain how you can improve the accessibility of your React applications.

12. Real-World Scenarios

- How would you approach building a simple e-commerce application with React?
- Describe how you would implement user authentication in a React application.
- What considerations would you make for handling API data fetching in a React app?
- How do you handle error boundaries in React?
